You can download the tutorials or you can access them via a web browser via the Photoshop.com tutorial site; Adobe recommends using the Internet Explorer browser. # Organizing Your Images Photoshop's layers and channels are your most efficient tools for editing and organizing the images in your image editor. The layers panel is the place to begin. In this section, you learn how to drag and drop images into layers, how to view and hide and show layers, how to change the order of layers in your document, and how to apply and fine-tune effects to each individual layer. When you organize an image using layers, you can view and edit the image as a single object or as a series of independent objects. Each layer is a separate entity, so you can move, copy, duplicate, or hide layers as you wish. ## Putting Layers to Work for You In this section, you explore the following _layers basics_. You can perform some editing tasks only by making use of layers. Here, you review * Changing the order of layers You can use this tool to rearrange the order of layers in an image. Although you can never move a layer to a new layer level, you can rearrange the order in which you _add_ layers, as explained in the next section. * Hiding and showing layers You can see and work with each of the individual layers in your image. Also, because layers are the building blocks for composite images, you can adjust the appearance of a layer and apply effects

What you need to start 2. How to set a grungy look 3. How to remove the background and edit the image as a stock photo 4. How to add a sunbeam effect 5. How to edit the sunbeam 6. How to add some color edits 7. What not to do when choosing a grungy look [copy link to clipboard] #1. What you need to start This tutorial was made with Adobe Photoshop CC 2019. If you use an older version, some of the filters and effects might not be available. For the dark area: For the foreground: For the background: #2. Then remove the background by replacing the background image with one from another stock photo. #3. How to remove the background and edit the image as a stock photo This will allow you to set the background to a white/transparent one. Then replace the background image with another one, and delete the unwanted image. Once you're done editing your photo, print the image and scan the edited one as a stock photo. #4. How to add a sunbeam effect The sunbeam effect is a great way to add brightness, depth, and contrast to your images. It is built into Adobe Camera Raw (ACR) but is not available in most other RAW editors. If you don't have ACR, you can load the image into Photoshop. #5. How to edit the sunbeam The sunbeam will need some work: The color of the sunbeam will need to be corrected The shadow of the sunbeam needs to be increased. The open space between the upper and middle levels of the Central Station has been preserved in this picture by French architect Dominique Perrault. To the upper level of the Central Station, Perrault has constructed two sloping floors, which run down to the L2 level (lower level 2). The lower level can be accessed through the lower corridor of the station. It contains shops, offices and other businesses. The open space between the upper and middle levels creates a connection between two separate levels, giving a new image to the former Central Station, nowadays split into two levels. This space has been preserved thanks to a sweeping semicircular roof, which surrounds the entire building. The project was mainly the result of a compromise between the architect, the French Ministry of Transport, and the concessionaire, the railway-carrier SNCF. The compromise position was a merger of the vision of the railway operators with the architect's vision. The planner Henri Pinto of Provence-les-Alpes Regional Council wished to keep a clear view from the station towards the shops, offices and businesses on the lower level. The lobby of the station would provide a meeting point for the passengers and the staff. The vision of the railway operators was to give passengers a new experience by making the station wider, and, therefore, bigger. The current layout of the Central Station is the result of various decisions and compromises. The merger of the visions of the railway operators and the architect, which is evident in the preserved connection, started in the 1980s. The idea of a merger was brought about partly by the architects. The station car-parks were the result of a compromise between the architect and the rail-carrier, who had a vision of a modern station for the 21st century, and the planners, who wanted to retain the historic street-level before the modernisation of the station. There were other compromises. The architect wanted to create a naturally ventilated station, but he was not allowed to change the three façade of the building. In the lobby, some designers wanted a ceiling with parquet flooring, and others a concrete ceiling. The architects: the architect, the politician and the concessionaire The architects, Dominique Perrault and Jacques Rougerie, are of equal importance for this project. They were the architects who created the station and, therefore, the concessionaire built the station according to their plans. Rougerie was the commissioner

Q: How to find this Taylor series? Find the Taylor series of the following function:

$f(x) = \frac{1}{x+1}$ at $x=0$ I did this: $f(0)=1$, so $a=1$, $a_n = \frac{1}{n}$ Is

that good? And is this a correct way to find a Taylor series at point 0? A: There is no reason to multiply the series by $\frac{1}{x+1}$. This can actually be a problem because it causes terms with negative powers to diverge. What you actually need to do is apply the Lagrange

formula at $x=0$. $\sum_{k=0}^n \frac{\partial^k f(0)}{\partial x^k} (x+1)^n =$

$\frac{\partial^n}{\partial x^n} f(0)$ Then, $\sum_{k=0}^n \frac{\partial^k f(0)}{\partial x^k} (x+1)^n = \frac{\partial^n}{\partial x^n} f(0) = \frac{(-1)^n \cdot n!}{(x+1)^{n+1}}$

Q: Multiple files for a single REST service in an external library I am working with microservices in Spring Boot, of which I have several written in Java. I currently have one of my microservices running on 2 separate servers on local host, within the same WAR file (using IntelliJ). Now I have a 3rd microservice, which I'd like to move to a separate WAR file, as a separate microservice. Within this external microservice, I will be needing to make SOAP requests to the original microservice and do some work within the external service. In

order for this to work, there needs to be a way to pass around some IPC key/value to the other microservices and pass that key/value back and forth. Would the 2 WAR files need to be in the same application (parent) WAR file? How would I accomplish this without having 2 different microservices? A: An alternative approach to using JWK/JWT
