When I retrieve the data on the UI, I can see the uid and the first and last name. When I go to another record and I can see the full detail of that record. Can we do that same thing in the database and how? Database Structure: Help me!!! A: Solution is in your case would be to create child node for each different detail and add the child nodes to it, then you will access them using and monitoring them within child. I hope this will help you. refer to this. And for reference of documentation of firebase database you can follow this
