AutoCAD features AutoCAD has many powerful features to create 2D drawings. Features like the ability to draw text, changing styles, colors, font, paragraph, spacing, multiple lines, multiple points and images are some of the most used in AutoCAD. It also features a grid for easy drawing alignments, line and area drawings and 3D modeling with the ability to view and edit parts and components from any angle. AutoCAD also features an infinite grid that enables the user to draw anywhere on the page, making it the most commonly used, flexible,

high-performance drafting tool available today. From plan views to 3D views, AutoCAD's ViewCube tool allows the user to move around any object in three-dimensional space as if it were on the real workspace. The new AutoCAD LT (AutoCAD 2018) also has AutoShape technology, which enables the user to click and drag to create custom, customizable shapes that can be placed anywhere in a drawing. AutoCAD has the unique capability of producing printouts of drawings without first having to be saved to the disk. It also features a large number of functions to manipulate and format drawing objects and features, such as rulers, dimension, styles, text, shading, linetypes, gradients, views, filters, AutoLISP, VBA, and the ability to make your own macros or functions with the Python-based programming language, ObjectARX. AutoCAD LT (2017 and newer) has also added an event loop for mouse and touch interaction. In addition, the interface has been redesigned to make it easier to use and navigate,

as well as improve the overall performance. AutoCAD LT 2018 features include: AutoLISP programming language: Import and export drawing objects via the "Import and Export from other software" dialogs. "Ribbon" drafting tool (very similar to the new Microsoft Office Ribbon), used for creating drawings or for editing objects. AutoLISP scripting for programmatic user interaction; an extension of the AutoLISP language, it allows users to create applications that can operate on model data and also have the capability of being used within the AutoCAD application. The ability to create dynamic information in drawings, such as variables, which can be controlled programmatically and then saved to the drawing. Design Review: Design Review allows the user to have the ability to view a drawing's design history in a `af5dca3d97`

What's New In AutoCAD?

Drawing Hints: Update your preference settings automatically in the application startup. (video: 1:15 min.) Drawing Metadata Tools: Open, edit, and export your drawings with metadata, without loading the DWG file. Powerful Design and Drafting Tools: Use feature lines to effectively generate any shape on the screen, including straight line, curves, and multidimensional shapes. Choose the segments you want to merge or split at any location, and all the segments are automatically generated. Easily create complex multidimensional shapes. More Efficient Drafting Workflow: Use scale models to control the view and scale in your drawings. (video: 3:30 min.) Greater Visual Enhancement: Generate

perspective and orthographic views with your current view, and always be aware of the current view plane. (video: 2:00 min.) Efficient Navigation and Document Management: Select and display specific pages of DWG or PDF files with a click of the keyboard. (video: 4:35 min.) More efficient drawing tools: CADTEK has long offered AutoCAD 2D and 3D design tools to help you to automate your designs. In AutoCAD 2020, we have added many new design tools, which you can check out in this video. More accurate rendering and parameterizing: Use AutoCAD DesignCenter for simple, fast, and accurate rendering. Parameterize simple and complex geometry in your drawings, and create new parametric families, import and export parts from DXF, and more. More dynamic application: Now you can perform actions like typing in text, opening files, and inserting or exporting images, shapes, and text, all within a single application window. Expanded support for parametric modeling: One of the most powerful new features of AutoCAD

2020 is the ability to quickly and accurately create parametric objects. You can now create parametric families, manage parametric families, import and export parametric families from DXF and DWG, and perform several other operations. Improved integrated design tools: Now the DesignCenter can be accessed from any menu, and it displays an easy to navigate library of common design objects, including pipes, profiles, profiles, profiles, arcs, arcs, circles, arcs, and more.
